

Kindergarten Philosophy at Turnbull School

We believe every child is deserving of a safe, nurturing environment in which they will learn to express their unique interests, creativity and abilities.

At Turnbull School, we are committed to providing a dynamic, interactive child-centred Kindergarten Program. We offer meaningful and engaging learning experiences for each individual child to expand their knowledge and to deepen their understanding of their world. Our program design stems from current research-based methodology. Within our classrooms, children are encouraged to participate in various educational opportunities, including whole group, small group and independent learning discoveries. Student directed inquiry, investigation and application is facilitated through careful attention to appropriate pedagogy and consideration for individual learning styles.

It is paramount that each aspect of the whole child is respected and acknowledged through personally meaningful challenges. Success and enjoyment in this process promotes critical thinking skills, independence and creative problem solving. Our curriculum offers a solid foundation for confidently entering grade one as well as motivation and enthusiasm for lifelong learning.
